IOS APP

MongoDB | Express | React Native | Node.js
Git | Adobe Photoshop CC 2017

Frontend Developer for iOS app: Woven

Created interactive hidden messages and display based on user interactions

Connected user interactions to MongoDB via RESTful API for real-time update between linked users

<https://woven-app.com> 📱

WEB APP

React-Redux | Ruby on Rails | PostgreSQL
HTML | SCSS | Git

Sole Developer for web app: Pixel Pusher

Increased responsiveness by architecting a single page web application

Implemented a CDN for scalability while saving bandwidth by reducing HTTP requests

Simplified front-end application using Webpack built tool to bundle static assets into one JS file

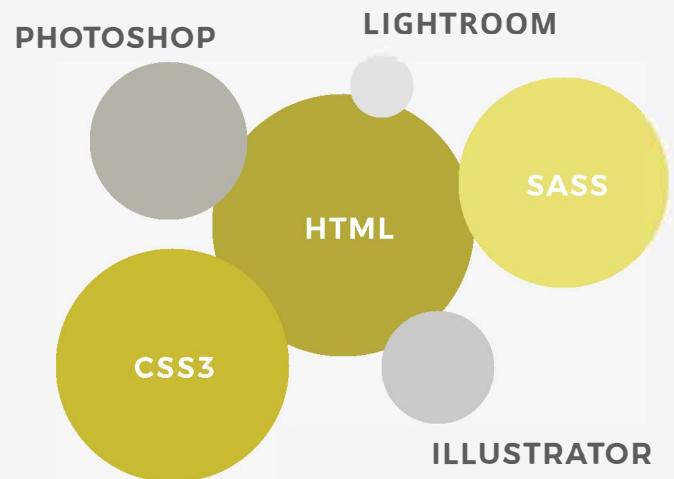

Built clean, reusable modals and a user authentication form for growth flexibility
